Integrated review of Profit & Loss, Balance Sheet,
Cash Flow and key financial ratios

FY2024 vs FY2025 Actuals

Presented By: Pritam Saha

Executive Financial Snapshot

FY2025 performance compared with FY2024 actuals

What the model shows

Top-line growth was strong: revenue rose from \$31.5M to \$53.8M.

Profitability expanded materially: EBITDA margin improved from 4.7% to 10.3%.

Operating cash generation strengthened to \$11.4M, supporting higher investment activity.

Equity increased from \$23.1M to \$31.0M, while total assets expanded.

Key watchpoints

Current ratio declined from 1.88x to 1.38x, indicating tighter short-term liquidity.

Inventory increased by 40.4%, requiring continued working-capital monitoring.

Capital expenditure rose to \$8.0M, materially above FY2024.

Year-end cash reduced to \$17.6M after investment and financing outflows.

Profit & Loss Performance

Revenue growth translated into significantly higher operating and net profitability

Gross Margin

21.0%

→ 25.3%

EBITDA Margin

4.7%

→ 10.3%

Operating Margin

6.3%

→ 12.1%

Analytical interpretation

Revenue increased 70.7% YoY, from \$31.5M to \$53.8M.

Gross profit more than doubled to \$13.6M, reflecting improved gross economics.

EBITDA increased from \$1.5M to \$5.5M; margin expanded by 5.5 percentage points.

Net interest expense improved from \$-0.7M to \$-0.3M, supporting bottom-line growth.

PAT rose to \$5.6M from \$0.9M.

Balance Sheet & Working Capital

Asset growth was supported by higher equity, while working-capital intensity increased

Cash

\$17.6M

-9.3% YoY

Inventory

\$5.8M

+40.4% YoY

Current Ratio

1.38x

FY24 1.88x

Key balance-sheet observations

Total assets grew 19.1% to \$62.1M, led by higher PP&E.

Total liabilities increased 7.5%, while equity increased 34.4%.

Inventory rose 40.4%, consistent with higher business activity but increasing working-capital needs.

Net working capital change recorded in the model was \$5.7M, requiring ongoing cash-conversion monitoring.

Cash Flow Analysis

Operating cash generation improved substantially despite higher capital investment

Chart Title

Operating CF

\$11.4M

+92.6% YoY

CapEx

\$8.0M

+147.2% YoY

Free Cash Flow

\$3.4M

+27.1% YoY

Cash-flow drivers

Operating cash flow increased to \$11.4M from \$5.9M.

Inventory was a major use of operating cash in FY2025, with a \$1.7M cash outflow.

CapEx increased to \$8.0M, primarily reflecting higher property and equipment purchases.

Financing cash flow was negative in FY2025 as debt repayments exceeded new debt proceeds.

Ending cash remained substantial at \$17.6M.

Ratio Dashboard & Overall Assessment

Key indicators point to stronger profitability and debt-servicing capacity, with liquidity and investment intensity to monitor

Metric	FY2024	FY2025	Movement
EBITDA Margin	4.7%	10.3%	+5.5 pp
Operating Margin	6.3%	12.1%	+5.8 pp
EBITDA / Net Interest	2.08x	17.53x	+15.45x
Current Ratio	1.88x	1.38x	-0.50x
Leverage Metric	7.82x	1.24x	-6.59x
Net Leverage	-5.15x	-1.94x	3.21x

Key analytical takeaways

Profitability improved materially, with EBITDA and operating margins expanding.

Interest coverage strengthened sharply, indicating much stronger operating capacity relative to net interest expense.

The leverage metric declined substantially in the model, reflecting improved earnings relative to liabilities.

Liquidity weakened modestly as the current ratio declined and cash reduced.

Higher CapEx and inventory investment should remain central to future cash-flow monitoring.

Portfolio focus: integrated financial statement analysis, ratio interpretation, working-capital review and cash-flow assessment.
